

Automated Border Control Gates for Smoother Border Crossings

Juha Knuuttila

Laurea University of Applied Sciences
Finland

Content

1. Elements and concepts of making a queue for border crossing
 2. Lessons and regulations from USA
 3. EUROPE´ s border gate development
 4. Finland´ s challenge: tourism from East
- 

1. Basic elements and concepts of making a queue for border crossing

"A short guide how to get rid of tourists and live your life in security ever after..."

Your passports, please!

- ▶ Result from nationalism/World War I
 - ▶ Visa (Finland issued over one million in St. Petersburg alone last year, process outsourced to Indian company)
 - ▶ Frequent traveller programs (No-Q, SENTRI etc.)
 - ▶ Schengen Code
 - Prum Agreement
 - Third country citizen
- 

Your e-passports, please!

What is Automated Border Control (ABC)?

ABC systems:

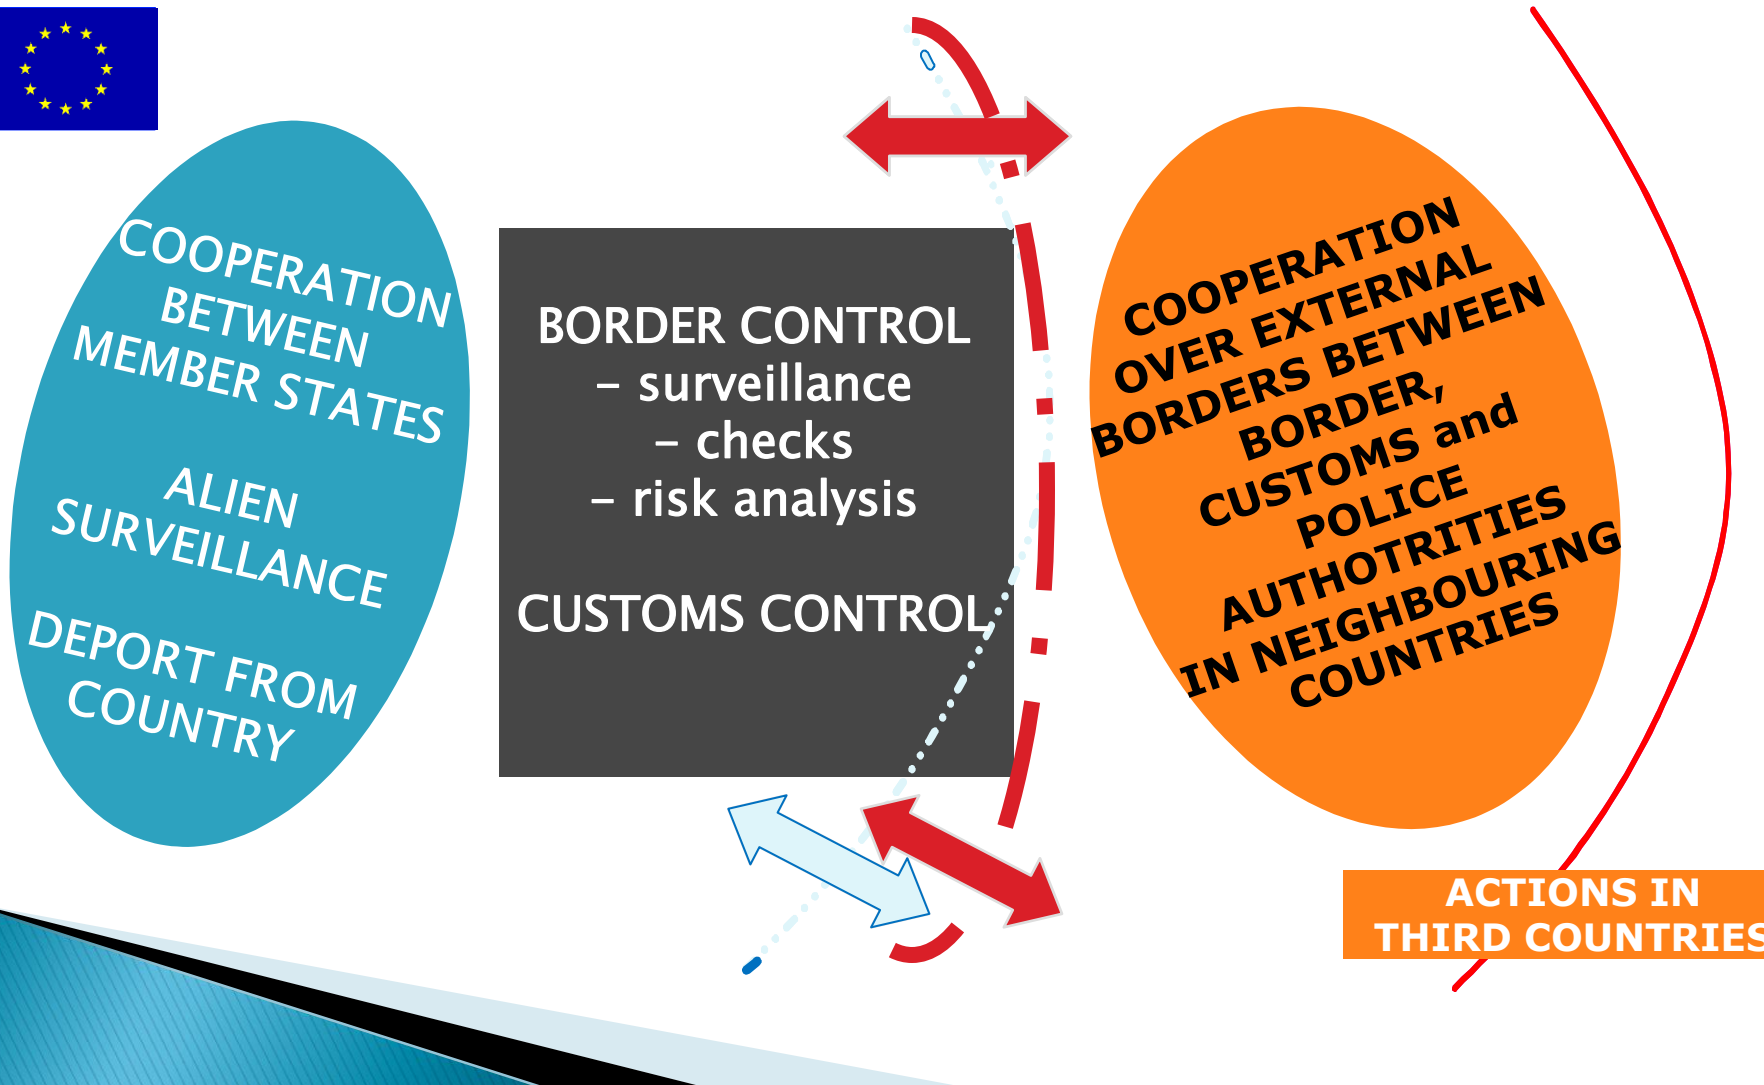

- E– travel document based
- Requiring pre–enrolment

Basis for the discussion:

- ABC systems based on e–passports and facial recognition for EU/EEA citizens
- Fingerprint another ID to be applied in EU

EU integrated four tier border management system

ABC systems endorsed by European Commission in present legal framework

- 3 operational
- 1 pilot
- 5 planned pilots
- ?

■ Pilot projects financed by European Border Fund (1,8 billion euros=2,7 billion USD) available for EU's member states

From Present Low-End to Future High-End Gates

- Low-End Gates

- Present passport-identification kiosks used
 - Frontex's study in Europe
- Primary screening

10 years of progressive work

- High-End Gates

- Current research done in UoA led networks
- Further proposals to DHS and Finnish Technology and Innovation Eagency, ABC4EU
- Frequent traveler systems
- Secondary etc. screening
- Interactive

EU RULES

Technical Specifications for biometrics in passports

Commission decision on facial image C(2005) 409 final of
28/02/2005

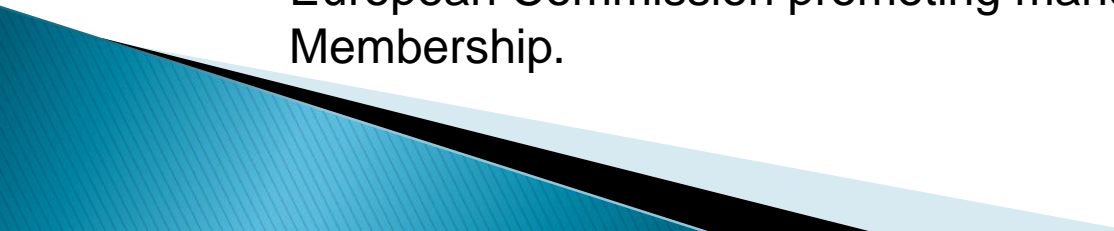

Exchange of certificates according to ICAO by diplomatic means.

Discussion in the Committee created by Article 6 of Regulation (EC)
1683/95 laying down a uniform format for visa:

Decided to exchange certificates in Article 6 Cte.

Commission decision on Extended Access Control C (2006) 2909
final of 28/06/2006:

Task: adoption of a common certificate policy within one year.
European Commission promoting mandatory ICAO PKD
Membership.

2.Lessons and regulations from USA

- ▶ USA has about 1 billion border crossings/year
- ▶ Europe/Schengen area about half of that

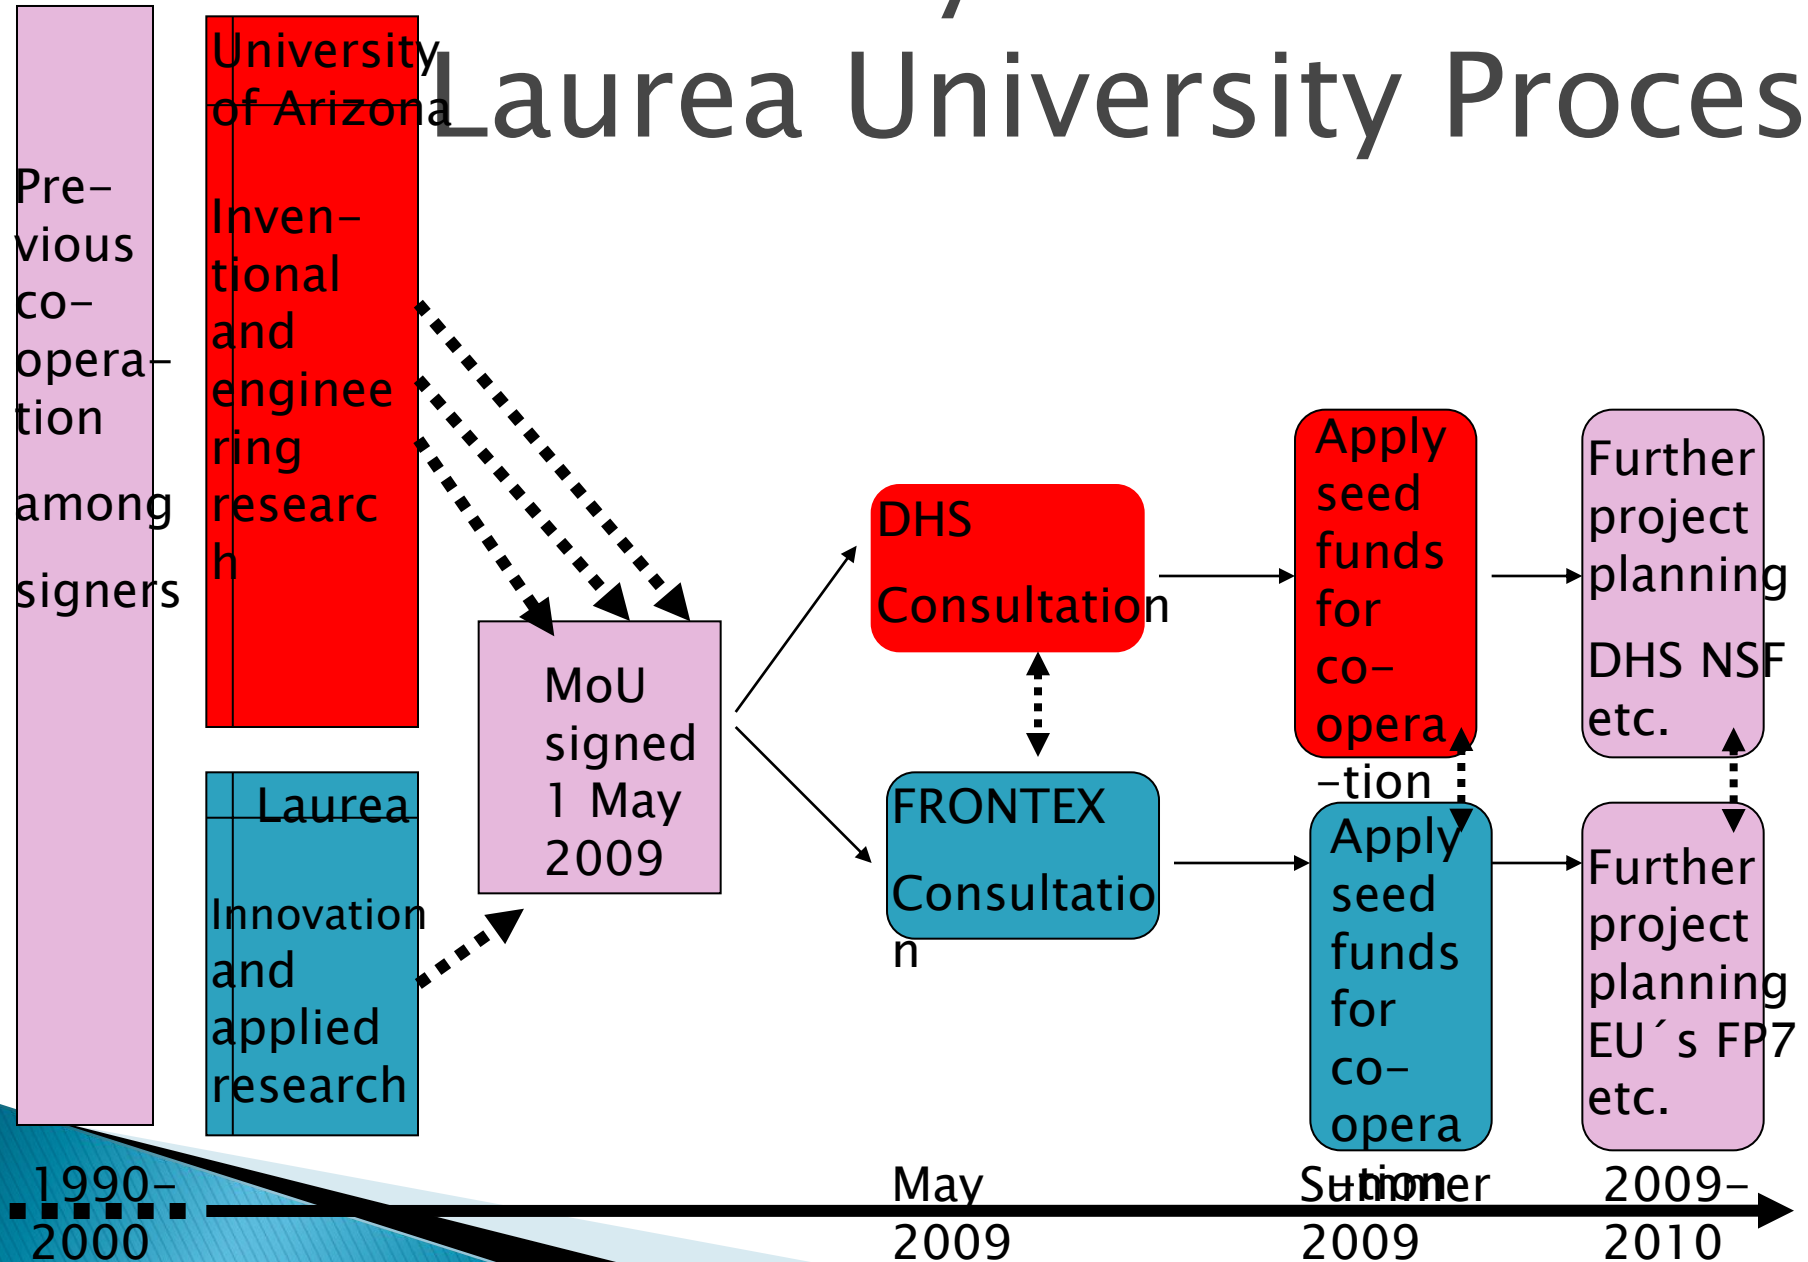

Body scanners deployed rapidly. What next?

Regulation starts from bomb in Ahmed's underpants

ire Electronic Network for Travelers Rapid Inspection

- Expedited processing for registered, pre-approved travelers
- Dedicated lanes for SENTRI users
- Automated person and vehicle identification
- Processing time 3–4 times faster than normal

Smooth operating in USA

SENTRI lane at U.S. – Mexico border

NEXUS lane at U.S. – Canada border

3. EUROPE´ s border gate development

- ▶ Towards more flexible integrated border checks with mobile devices for peaks and extra-ordinary occasions

FRONTEX study results (by Rasa Karaubaskaite)

ABC systems increasingly tested/used by
European Union's Member States:

- National-based approach
- No overview of state of the art and key aspects of technology
- No common European approach
- No minimum requirements/standards

Case Portugal

- ▶ Includes business case Vision Box – inherited casino face recognition technology
 - Big business is watching
 - Competition ?

Portuguese Electronic Passport - PEP

The Kiosk-PEP [**K-PEP**] performs live enrollment in about 200 different sites and 270 kiosks (in-land and Portuguese consulates)

Portugal's experience

- A significant experience: 1.150.000 pax
 - ▶ Positive feedback from citizens
 - ▶ Decrease of Border crossing time:
 - . 1 border guard = 7 e-gates (16 s)
 - . 1 border guard controls 26 pax/mn
 - . Increase of human resources of 430%
 - . Improvement of the levels of attendance on the second line control checks
 - ▶ Minimization of queuing time through better handling of passengers' flow

Approaching IBC : Kiosk2 + x

Kiosk1 = Work done in University of Arizona

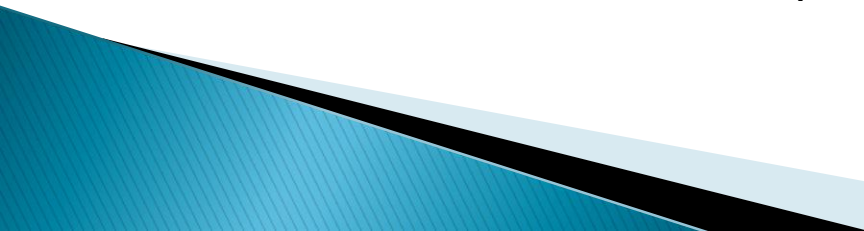

Kiosk2 = To be built for replication studies in Finland

Kiosk2+ = Built in a manner that make add-ons possible, (API-wise?)

x = various add-ons like eNose and other sensors or features under study

”Not only id-ing people , but informing for something else”

(Phrase vicarially learned and modified from Judee Burgoon)

Integrated Border Control (IBC)

(Concept by Edgar Beugels, FRONTEX Head of R&D Unit)

- ▶ Modularity
- ▶ Standardization
 - *de jure* e.g. according EU´s new charter
 - *de facto* e.g. reacting to threats by terrorists
 - Body scanning
- ▶ Inter-national Governance transforming existing structures and channels
- ▶ Synchronization with existing intelligence and database systems and work practices
- ▶ Exit-Entry-System legislation now in European Parliament
- ▶ EUROSUR coming

From Automated Border Control (ABC) To Integrated Border Control (IBC)

ABC

- ▶ is penetrating digitalization by automating border practices herited from VWI, WWII and Cold War
- ▶ focusing in EU citizens´ mobility
- ▶ creating basic skills for IBC
 - states´ cabapilities vary very much (e.g. Portugal,Sweden, France,Creece,Rumania,Lit huania)

IBC

- ▶ is focusing in future concepts enhanced by deeper inter-national collaboration (actions on terror, immigration policies etc.)
- ▶ preparing for EU´s forthcoming exit-entry-system
- ▶ developing public-private-partnerships into area
 - new service concepts and business models including airlines e.g.

4.Finland's challenge: tourism from East

Finland – Why bother?

- 1300 km borderline with Russia
- 60 % of Russia's import truck loads go through Finland and 31 % of her imports in total
- Finland's biggest trading partner
- Russians top Finland's tourism and immigration lists
 - 21 illegal immigrants crossed border 2009

Case Finland

Russians are taking very good care of their side of the border in good cooperation with Finnish Boarder Guard.

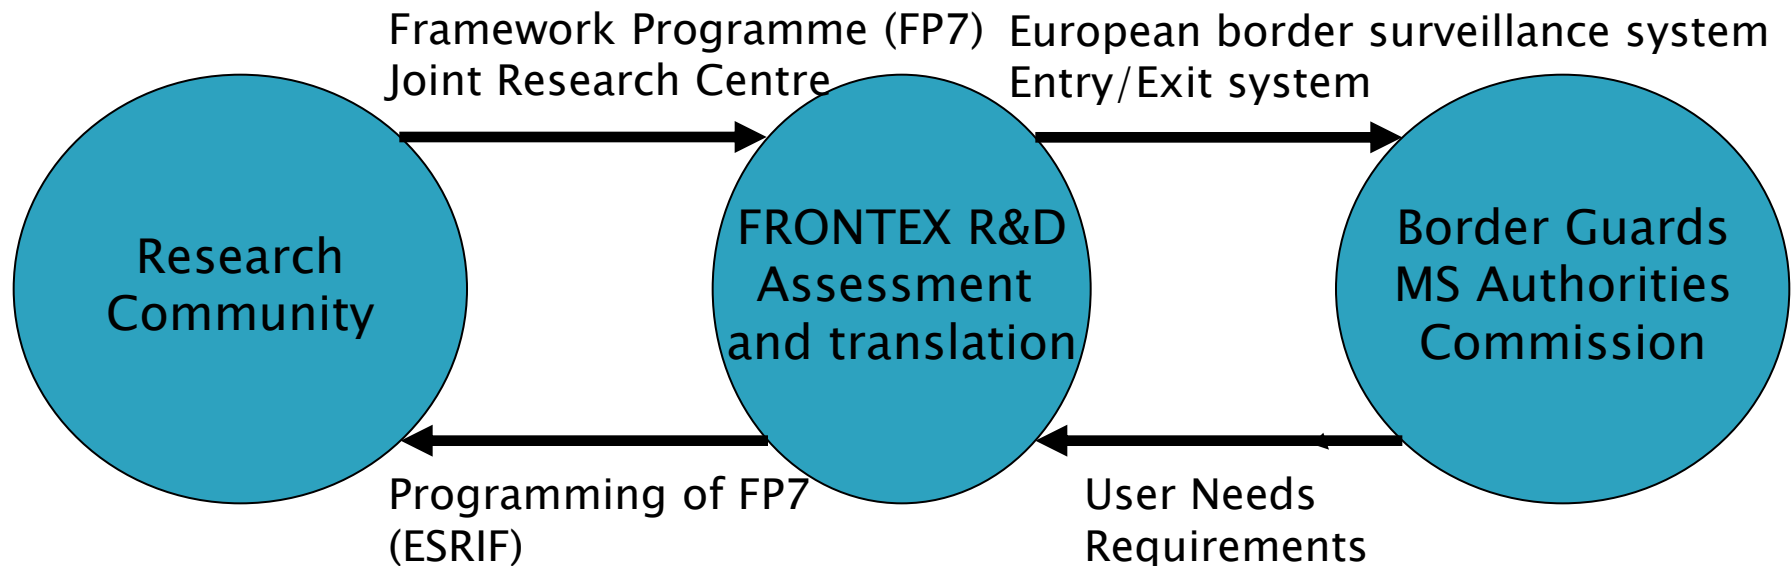

Putin in the aftermath of Beslan school incident:

” Why do we protect us from Finland instead of south, where we do not even have borders!”

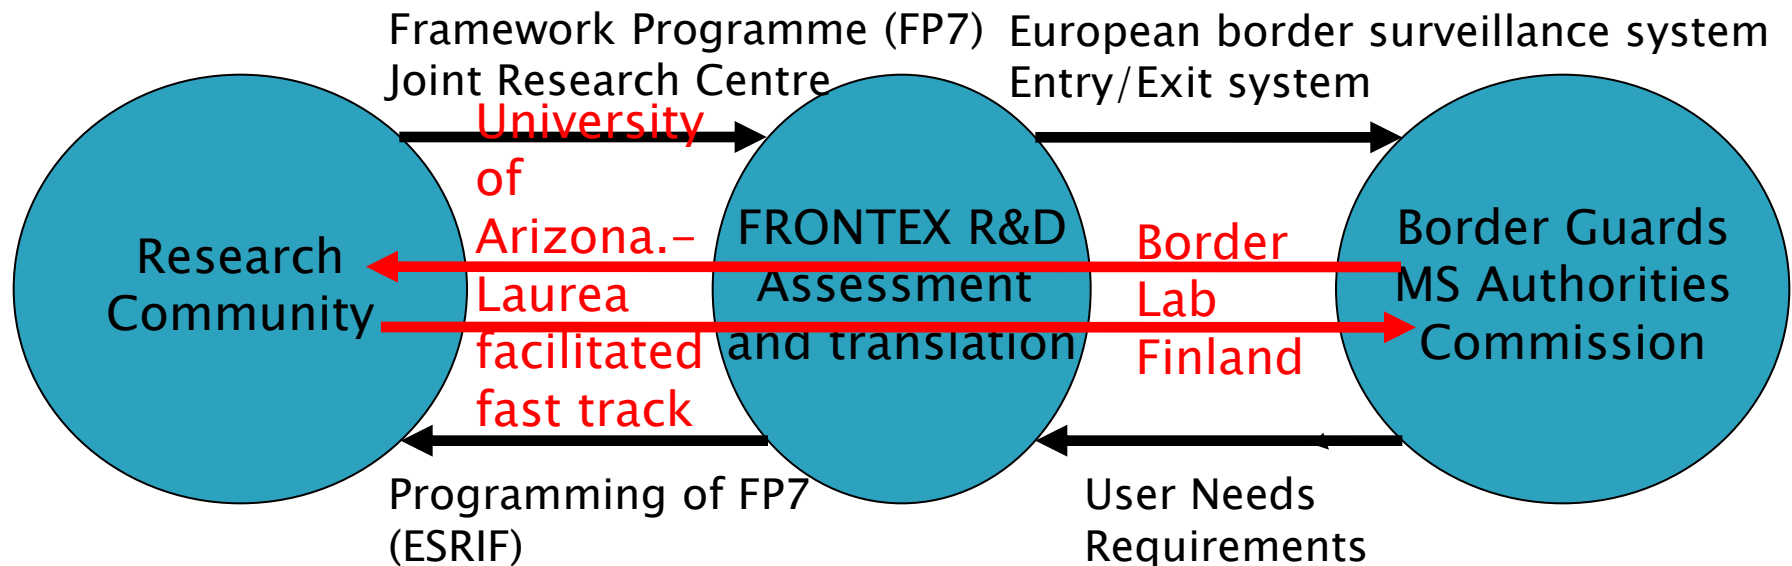

”You have to have your kiosks ready when, not if, Russians get visa freedom to EU for logistical and national economical reasons.” – Finnish Boarder Guard Major 9/2009

Frontex in Research and Development

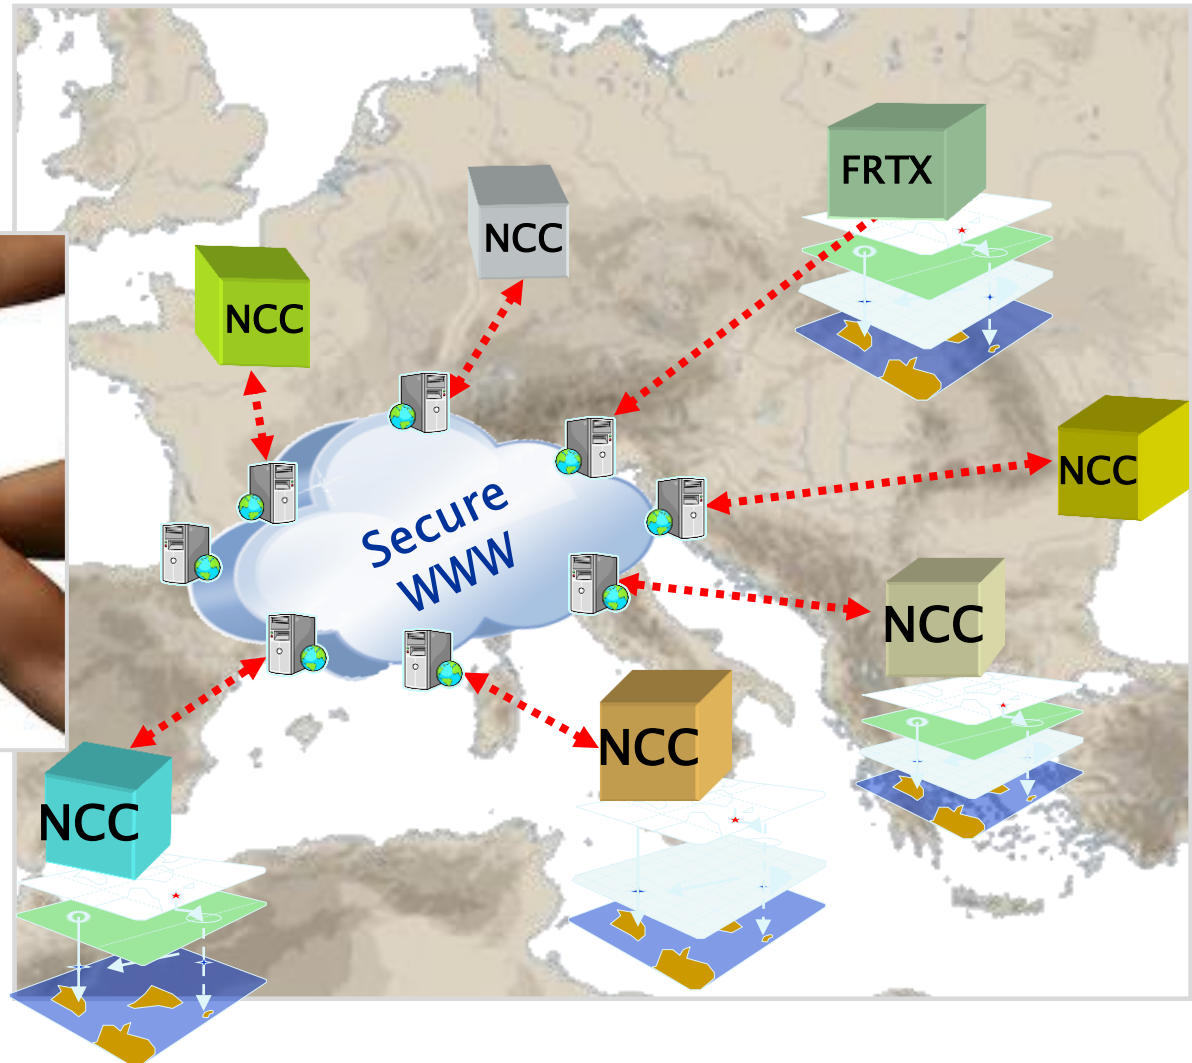

- Two-way link between researchers and end-users
- Strong position in EU security research

- Two-way link between researchers and end-users
- Strong position in EU security research
